

# LED (Light Emitting Diode)

**LED is a semiconductor light source.**

This means that if connected correctly (suitable voltage) to an energy source (battery), it will turn on.

They come in colour and consume very low energy.

Check in this [video](#) how a LED works.

This project has received funding from the European Union's Horizon 2020 Coordination & Research and Innovation Action under Grant Agreement No 731345.
